

HaloHouse – Booking API Proposal

1. Get Studios

GET /api/studios

Returns all available recording spaces.

2. Get Services

GET /api/services

Returns optional add-on services (editing, setup, etc).

3. Check Slot Availability

GET /api/availability

Query: studio_id, date (YYYY-MM-DD), duration (minutes)

Returns available time slots for a studio.

4. Create Booking

POST /api/bookings

Accepts studio, services, date, start/end time, customer details.

Creates a confirmed booking.

5. Get Booking Details

GET /api/bookings/{booking_id}

Returns booking information.

6. Update / Cancel Booking

PUT /api/bookings/{booking_id}

DELETE /api/bookings/{booking_id}

Notes

- Booking is slot-based (date + time)
- Availability prevents double booking
- Supports multiple services per booking
- Timezone included for future expansion
